

Health Choice Vermont works to preserve the vital personal freedom and human right to informed consent, privacy, and choice for medical procedures. We urge all Vermont Senators, Representatives and persons to support your rights by taking action.

Vermont Stands Up is a people-powered initiative standing for freedom, health and choice.

HOUSE BILLS TO SUPPORT:

H452 (prohibiting vaccine passports) – in House Health Care Committee, this is a “short form” bill that needs language added to it. Please see the language in H283 and sign the petition at our website to support this bill!

H283 (recognizing the right to make health decisions free from coercion) – in Human Services, this bill recognizes and protects the right of all persons to make medical decisions, free from incentives (coercion) or discrimination (penalty).

H322 (expanding daycare/school/college vaccine exemptions) – this bill recognizes the right of parents and students to hold medical, religious or conscientious beliefs opposed to vaccination. It also removes coercive and misleading language currently on the state forms.

H323 (vaccine adverse events) – this bill requires the state to provide a public report on vaccine adverse reactions, which are reported by Vermont consumers to the government database (VAERS).

- We need your help in protecting the freedom of all Vermont residents to make their own healthcare decisions for themselves and their families without coercion.
- We have a lot to accomplish. Volunteer (survey coming via email – add info@healthchoicevt.com info@vermontstandsup.com to your contacts inbox...)

The Future of Health Freedom in Vermont

Tonight's Special Topic: Facial Masking in Schools

Requirements for the facial-masking of non-vaccinated persons are being discussed at the [Vermont Legislature](#), and beyond.

We all want healthy students, teachers, schools and communities. But among other things, facial-masking requirements used in this way would violate medical privacy. And for non-vaccinated kids (students), policies like this could lead to hazing, shaming, bullying, or worse. If **health** is the primary goal, then it is reasonable to ask: Are Masks Healthy? Do Masks Work? Are Masks Effective at Mitigating the Spread of COVID-19?

Join us tonight as we welcome Amy Hornblas, B.A., a former Vermont School Health Educator and author of the [Vermont Mask Survey](#). Amy will present the the results of her research with us, and her short presentation followed by a brief Q&A and discussion. Hope you can join us!
