Here Are Some Science-Based

REAL FACTS

about

CHILDREN WEARING MASKS

1. **Face masks create oxygen deficiency.**[1]
   This can result in the following effects:
   •Irregular breathing •Accelerated heartbeat •Impaired attention and thinking •Impaired coordination •Rapid fatigue that may lead to permanent heart damage

2. **Face masks create difficulty expelling carbon dioxide.**[2]
   This can result in the following effects:
   •Headache •Increased pressure inside the skull •Nervous system changes •Increased "work of breathing", which is result of breathing through a filter medium •Cardiovascular effects •Fatigue

3. **Face masks commonly worn are not proven to stop viral transmission.**[3a] And they have only been approved for *Emergency Use* which means, by law, they can be refused.[3b]

4. **OSHA has very strict guidelines for wearing masks correctly for effectiveness, which includes medical screening, training & proper supervision of workers.**[4]
   This is *not happening* with children and the general public.

5. **This past year, some high-quality studies of short-term impacts on children have been published, showing harm.**[5] **The effects of *prolonged* mask use in the young have not been studied.**
